

# Non-Scalpel Vasectomy

*Permanent Birth Control for Men*

No-scalpel vasectomy was introduced in the United States in 1988 and is now used by many doctors.

A Vasectomy is a safe and effective surgical procedure that makes a man sterile.

Reasons for having a non-scalpel vasectomy as compared to a conventional vasectomy:

- No incision with a scalpel - only a small puncture
- Usually no stitches
- Usually a faster procedure lasting between 20 to 30 minutes
- Usually a faster recovery
- Usually less chance of bleeding and other complication
- Usually less discomfort
- Just as effective as a regular vasectomy

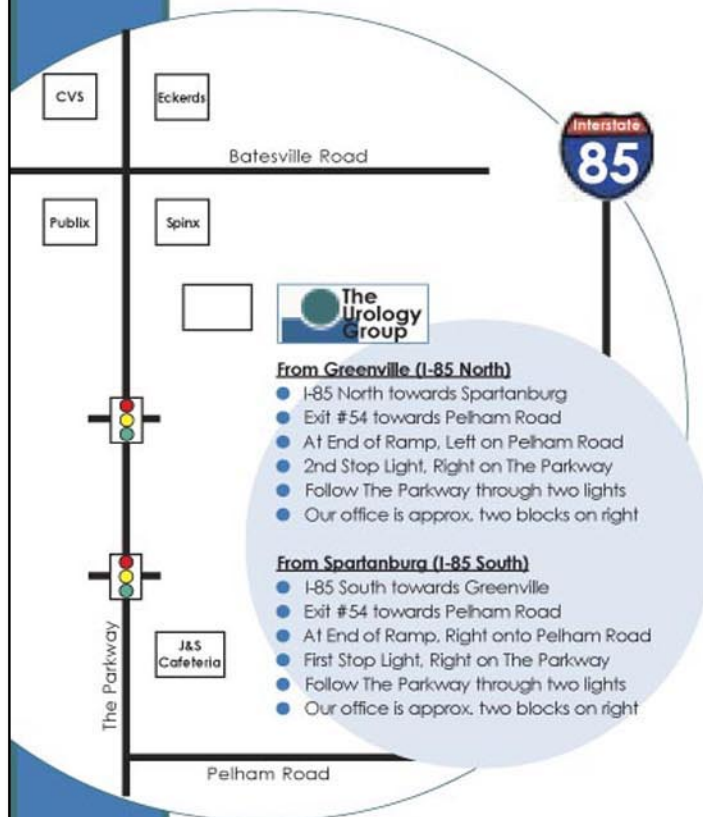

For more information on non-scalpel vasectomy or to schedule an appointment contact our office at **864-879-7481**
